SUMMARY

Master's student in Computer Science with a strong background in software engineering and cloud technologies. Proven experience in developing scalable applications and optimizing system performance, particularly with databases and distributed systems.

SKILLS

Java, C#, Python, C++, SQL, AWS, DynamoDB, Spring Boot, Microservices, RESTful APIs, Git, Docker, Jenkins, Postman, Data Structures, Algorithms

WORK EXPERIENCE

Syracuse University, Syracuse, NY

Jun 2024 - Present

Software Engineering Intern

- Orchestrated a scalable Library Booking System using microservices architecture with React.js, Java, SQL, AWS S3 and Lambda; enabled seamless booking for over 1,000 users while ensuring high system performance.
- Enhanced inventory management by developing GraphQL-based real-time availability tracking features, reducing scheduling conflicts and boosting resource utilization by 25%.
- Secured the system by integrating OAuth2 with Spring Security and validated system integrity with automated unit and integration tests using JUnit, achieving 100% test coverage.

Savana Inc, Malvern, PA

Jun 2023 - Aug 2023

Software Engineering Intern

- Engineered a scalable B2C platform leveraging Angular and C# with .NET, reducing environment migration downtime by 30% by optimizing deployment workflows and resolving rate limiting bottlenecks.
- Bolstered interactive table functionality using Redux, enhancing user engagement by 20%, and refined data retrieval for 7,000+ users through high-performance RESTful APIs, driving a 20% boost in service adoption.
- Deployed a Redis caching layer to optimize heavy database queries, reducing page load times by 25% and improving response rates for 5,000+ users accessing real-time content.

Accenture, Pune, MH

Jun 2021 - Jul 2022

Software Engineer

- Re-engineered order fulfillment modules using Java, Spring Boot, IBM Sterling, and MySQL, tailoring region-specific optimizations to achieve a 35% increase in processing efficiency.
- Streamlined backend testing pipelines by automating workflows with Jenkins and Postman, reducing integration errors by 20% and accelerating deployment timelines.
- Optimized data reporting with advanced SQL queries and ETL pipelines, resulting in a 25% improvement in data retrieval speed and reporting capabilities.

PROJECTS

Public Curative Health Care and Wellness Chatbot

- Developed an AI-driven healthcare chatbot using React.js, Node.js, Python, MongoDB, and DialogFlow's NLP capabilities, delivering real-time health advice and hospital location services to 500+ patients.
- Led a team of four to define requirements and implemented machine learning models (Decision Tree), achieving 90% accuracy in disease predictions and increasing patient participation by 15%.

TrackIT - Expense Made Easy

- Designed and deployed an iOS expense tracking app, leveraging Java backend services and scalable architecture to enhance transaction processing speed by 20%.
- Applied MVVM architecture to streamline client-server interactions and incorporated MapKit for location-based tracking, improving banking access by 15% and promoting smarter financial habits through analytics.

University Shuttle System

- Steered Java backend development for the University Shuttle System pilot program, leveraging Spring Boot and MySQL for efficient ride requests, attaining a 30% reduction in processing times.
- Devised 15 RESTful API endpoints and containerized the application using Docker, reducing deployment times by 30% and increasing system scalability by 20%.

EDUCATION

Syracuse University, Syracuse, NY
Master of Science in Computer Science

Aug 2022 - May 2024
GPA: 3.81/4.0

Vishwakarma Institute of Information Technology, Pune, MH
Bachelor of Technology in Computer Engineering

Aug 2017 - May 2021
GPA: 3.97/4.0
